CLOUD STORAGE

Store your critical surveillance footage safely off-site in the cloud for up to 90 days. No more complex on-site hardware and all your media, from all your cameras will be stored in a single, secure location. Access and manage your private cloud archive through our beautifully designed multi-camera Timeline on our web and mobile apps.
OPEN DEVICE SUPPORT

Use the cameras you want with SkyEye. Our platform is designed to work with the largest number of cameras possible, including leading brands such as Hanwha Techwin (Samsung), Amcrest, Axis, Hikvision, VIVOTEK and more. The service also supports the use of numerous local storage and encoder options, including SD cards, DVR/NVRs and encoders.

MULTI-SITE

Easily manage a large number of cameras, users and physical locations. SkyEye's multi-user feature allows for unlimited users on your account while restricting their account access and what cameras they can view, with limited account privileges. Since the service is cloud-based, you can connect cameras from unlimited number of physical locations, all while organizing cameras through our intuitive label feature.

EDGE STORAGE

Seamlessly integrate various local storage options, including SD card and Network Attached Storage (NAS), into your primary cloud storage solution. This ensures if your camera or site loses internet connectivity then events will still be captured locally and can be reviewed within your cloud apps.

CAMERA HEALTH CHECKS

Let SkyEye tell you when there's a problem with one of your cameras. If our cloud servers can't connect to your camera, you'll receive an alert that something could be wrong. Take advantage of our advanced cloud notification system that will work across all connected cameras. Camera Health Check and motion alerts are centrally managed and sent to your mobile device or email.
